

Optional Sticky Mat for XPJ-461UF

Product Highlights

- This is a double-sided coated mat which holds itself to the print table and accommodates a variety of target print objects
- The advantage is that no tapes or clamps are required, leaving the target print object undamaged and free from any adhesive residues after printing
- The sticky mat is the perfect complementary tool to the optional vacuum table for easy positioning and holding of small objects, smooth objects or objects which may easily move on the vacuum bed
- Print object outlines onto the mat and use it as a self-made jig for printing popular objects in small batches
- The sticky mat has holes matching the layout of the XPJ-461UF printer table which allows a jig to be attached without having to remove the sticky mat
- The sticky mat also includes indents matching the layout of the inside of the XPJ-461UF so that when the standard print table is removed you can still print onto objects thicker than 70 mm
